

How to install WORDij 3.0 on a Mac OS X version 10.5.

Note: WORDij 3.0 requires Java SE 6 to be installed and set as the default.

Steps:

1. Check to see what Java versions you have installed and which one is set as the default.
Use Finder to go to:
`/Applications/Utilities/Java/Java Preferences.app`
2. Click on the Java Preferences.app
3. Check to make sure you have Java SE 6 installed and it is at the top of the list for Java *application* versions.
If Java SE 6 is not the first application version listed, drag it to the top.

4. If you do not have Java SE 6 installed, download it from Apple at:
http://www.apple.com/downloads/macosx/apple/application_updates/javaformacosx105update1.html
5. After installation of Java SE 6, repeat steps 1 through 3.
6. Double click the WORDij.jar and it should start.
